Compressible flow problem with surface tension In this problem, we will consider the compressible flow of an ideal fluid with a constant and uniform density and temperature through a domain with no-slip boundary condition on the wall. The boundary conditions are: {| |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right| |align=left| |- |align=right
