It tells the story of a self-made businessman, who risks everything to protect his younger brother when they were children. To go through this movie, you can watch the best movies as well as your favorite tv shows and episodes free of charge.Q: Accessing an Array Variable from another class I'm having trouble with the following code. I have to access an array variable from another class and I can't seem to figure out the proper syntax. I'm creating a table in my project, which is very basic at the moment. I have my class declaration, the array declaration, and the class's use of the

array declared in the main class. This is how it currently looks. Main.cpp #include "car.h" #include "main.h" int main() { Car vehicle; vehicle.create_vehicle(); return 0; } car.h #ifndef __CAR_H__ #define __CAR_H__ class Car public: void create_vehicle(); }; #endif // __CAR_H__ car.cpp void Car::create_vehicle() Main main_object = new Main; main_object.create_vehicle(); main.h #ifndef __MAIN_H__ #define __MAIN_H__ #include "vehicle.h" class Main #endif // __MAIN_H__ void Main::create_vehicle() Vehicle vehicle_object; vehicle_object.add_header("Method"); vehicle_object.add_header("Create A Vehicle"); vehicle_object.add_header("Return"); vehicle_object.add_header("Done!"); vehicle.h #ifndef __VEHICLE f3e1b3768c
