X-Ways Trace License Code & Keygen Download [Mac/Win] (Latest)
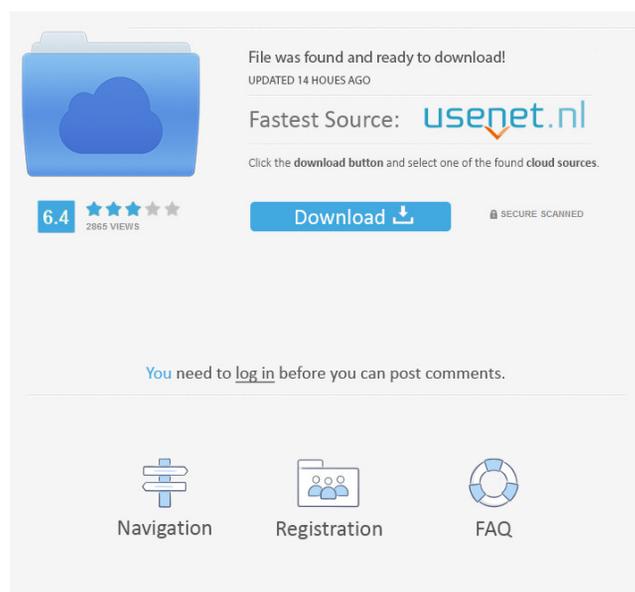

X-Ways Trace allows to track and examine any web browsing activity and deletion of files through the Windows recycle bin that took place on a certain computer. Deciphers Internet Explorer's ever-growing internal history/cache file index.dat. Displays complete URLs, date and time of the last visit, user names, file sizes, filename extensions, and more. Allows to sort by any criterion. Reads from one more more files you specify, or searches complete folders and subfolders, or even entire hard disks (or raw images of hard disks) in allocated space, free space, and slack space, for traces of someone having surfed the Internet. Occassionally, access to local files are logged, too. You may search for specific domain, file, and user names. Also deciphers the hidden Windows recycle bin file info2 located in every Recycled/Recycler folder. Displays the original path and filename, date and time of deletion, file size, and more, sometimes even if the recycle bin has been emptied. All the details compiled by X-Ways Trace can be exported to MS Excel. The files/disks examined by X-Ways Trace will not be altered by the examination. X-Ways Trace For PC

Allows to decode the contents of the built-in keyboard macro file. MACRODISK Description: Reads a (raw) binary image of the free

space from the hard disk. Macro disk files are typically represented as a sequence of bytes. Depending on the implementation of the operating system (DOS or Windows), these bytes are either a string (ASCII or EBCDIC) or a binary file in some more compressed format. MACRODISK derives the original (uncompressed) string from the sequence of bytes. The maximum length of the string is limited by the size of the disk image. The format of the extracted data is either a file in the text format (named by the file extension) or a sequence of integers (named by the BINARYHEX format). It is possible to specify the directory structure of the disk image, the internal data structure of the disk image and its content. It is also possible to choose whether or not the file names should be extracted. The amount of data that MACRODISK decodes depends on the performance of the hard disk or CD-ROM drive. It may take some seconds for a high-end drive, up to several minutes for an old PC hard disk or CD-ROM drive. TCHARDRIVE Description: Reads a (raw) binary image of the free space from the hard disk. TCHARDRIVE is a byte-oriented program that works like MACRODISK. The TCHARDRIVE format is the same as BINARYHEX.
