Melon A melon (,,) is a botanical fruit of the watermelon and cucumber family. Most people refer to the fruit as melon, as the names of different types of melon differ from country to country. The common English name comes from the Arabic qirniz, and is similar to the Greek, which in turn derived from, "melon". Classification Melons are split into two broad groups: watermelon, which have thin, shiny, deep green skin with watery flesh, and cucurbit melons, which have thick, dull-green or brown skin with thick flesh. The second group is further divided into cantaloupe, muskmelon, and honeydew melons, and many other cucurbit fruits. They are further differentiated by their shape and by the patterning on the surface of the fruit. The exceptions are cucumber and jicama, which are not botanically related. Watermelons are most commonly further distinguished into small-, medium-, and large-size. Cucumber melons include Thai, valanga, and good king kalabong. Honeydew melons include cintaloupes, and muskmelons include "sliced" (stem-free, harvested young, with no seeds) or "sand" (seeded, harvested when still immature, with mature seeds) types. Uses Melons are consumed fresh, or cooked (or processed into juice, puree, or paste). Freshly ripe melons contain a small amount of vitamins A, B, and C, potassium, calcium, and phosphorus, but are low in iron and are low in carbohydrate. Melons are also used to make confections

Whether it's wasting time or actually making use of your time, you better find a way to get rid of the "bread crumbs" that are leading you to the typical fat bottom career. It's not always easy to find that time saver, but luckily, there are tons of apps that really can help. This week's spotlight is all about the ones that help you stay focused while working, by analysing your work style and productivity. Read on for the details. 5 apps that save time and help you get more work done If you are more of a fly-by-the-seat-of-your-pants type of person, and "chewing gum and gum," where you continually refer to the same page to get more work done, you better change your approach. This is because, over the years, repeated bouts of this behavior can really give you a negative impact on your output, leaving you feeling unproductive and unhealthy to the point that you might lose interest in your job. It's time you kick this nasty habit, and, to that end, you need to do away with any old wallpaper from your PC, and replace it with the newest one. If you're short on time, pick from a list of free ones, and then, once you're set with a new desktop, try selecting a few productivity apps. Here's a rundown of the best among them. FocusList: Designed as a clipboard manager. Better than sticky notes: The clipboard manager is all about organizing items you have to copy to the clipboard, as well as ones you want to paste back from the one you're working on. In
