The second argument is a WinPcap file pointer which is where the device driver will place the packets in memory. The third argument is the flag to specify the interface. The code snippet below creates a Packet object: Dim wdev As IW32PcapDevice = New IW32PcapDevice(deviceName, FileToWrite) Dim objPkt As Packet = New Packet(wdev, FileToWrite, IpAdapterInd) Reading Packets: The following code shows how to read packets from a device. This code snippet reads from a device which is a valid WinPcap network device. The first argument is a device name. The second argument is a WinPcap file pointer which is where the device driver will place the packets in memory. The third argument is the flag to specify the interface.
