Towards Healthier Bread Making in Nigeria: Survey of Knowledge, Attitude and Behaviour of Bread Bakers in Ibadan, Oyo State, Nigeria. Bread is a staple food in many societies worldwide, but the loaf of bread varies in quality and composition from one culture to another. The effects of culture on food patterns and dietary practices are well-documented. The objective of this study was to determine the present knowledge and perception of Nigerian bread bakers on factors that influence the quality of bread and their intentions to modify their practice or change the present recipe in order to make healthier bread. The study used a questionnaire based cross-sectional study design conducted on bread bakers in five urban communities in Ibadan, Oyo State, South-Western Nigeria. Information was collected on the current knowledge and perception of Nigerian bread bakers regarding factors that influence the quality of bread and their attitudes and intentions regarding the modification of the present recipe. The results showed that only 1% of the total respondents had good knowledge on factors that influence the quality of bread while 6% held good perception on factors that influence the quality of bread. The Femoral and Peritoneal Bands of the Glutathione S-Transferase Pi Gene are Linked to the Susceptibility to Non-Obstructive Biliary Pancreatitis in Japanese. Glutathione S-transferase Pi (GSTP1) is associated with biliary and pancreatic diseases. The GSTP1I105V polymorphism has been associated with the development of biliary tract cancer. However, the relationship between GSTP1 polymorphisms and non-obstructive biliary pancreatitis (NOP) remains unknown. We performed a hospital-based, case-control study in association with GSTP1 polymorphisms to elucidate the association between GSTP1 polymorphisms and the susceptibility to NOP. The frequency of the GSTP1I105V A/A genotype was significantly higher in cases (28.3%) than controls (17.7%). Furthermore f30f4ceada
