Jajah Phone Buddy With Key Free Download PC/Windows

Jajah Phone Buddy is a visual Basic script and automation tool that lets you add jajah phonebook dialling to your favourite windows software. It simply moves the cursor to a phone number and press the hotkey to activate jajah dialer. The jajah phone buddy dialer then looks at the phone number, where the cursor was

---

previously, and formats the international country code automatically. If the phone number does not contain the international country code then the user can select the code from their own "Favourite countries" in the Jajah phone buddy. The system also provides redial and quick dial (favorite phone numbers) facilities too. Here are some key features of Jajah Phone Buddy:  Free software!!!

This is a free trial version. It can dial from Jajah to all other countries, save them as favourite and use redial and quick dial features. The system uses a Jajah (Jajah.net) voip account and you need to be connected to Jajah to make calls. You will be prompted to login to Jajah, after successful login it will add you to the Jajah user database and you

---

will be given the option to add the "Jajah Phone Buddy" to your windows application. When installed, the "Jajah Phone Buddy" dialog will appear when a Jajah dialer window is opened. The "Jajah Phone Buddy" dialer will ask you to enter your credentials for Jajah which you have already created in your Jajah user database. If you enter the wrong credentials the system will not dial. If you enter the

---

correct credentials, the "Jajah Phone Buddy" will start dialing a phone number by looking at the Jajah window which the mouse cursor is over, and getting the number from there. The dialer will get the country code automatically and will dial the country code and the phone number. If the dialer fails to dial the number, it will ask the user to select from the country list. The "Jajah Phone Buddy" will then dial the

---

selected country, and then the dialed number. The "Jajah Phone Buddy" dialer will save the phone number in your Jajah user database as a "favourite". It will not dial international numbers that are NOT part of the system, i.e. telephone numbers that don't contain country code, and also it will not dial calls to Jajah users. It will save all calls to favourites and redial, and it will also log all calls (to make

---

it easier for you to keep track of your call history). It will also give you quick dial and redial options so you can call the favourite numbers directly from your Jajah window. How to Install Jajah Phone Buddy: Jajah Phone Buddy is a free download from the Internet, install to your hard drive using a standard install program of your choice. When it is installed and ready to use, you can use it from any Windows

---

application. You can set it as the default Jajah dialer for that program. Simply move the mouse cursor
